PROJECT REPORT: DIGITAL LITERACY

Name: Parth Gujar

Registration Number: 25BAI11507

Branch: B.Tech, Computer Science and Engineering (AI & ML)

Institution: VIT Bhopal University

Course Code: CSE0001 - Digital Literacy

---

1. Introduction

In this project, I assumed the role of a Student Digital Ambassador. My primary objective was to curate resources and assist my peers in navigating the digital world safely, responsibly, and professionally. This report documents my practical journey through five distinct modules, culminating in a comprehensive Digital Literacy Portfolio. From creating visual awareness campaigns to understanding the nuances of modern cybercrimes, this portfolio serves as a practical guide. The activities and reflections outlined in this document emphasize the critical importance of maintaining a positive online presence, communicating effectively in digital workspaces, and practicing rigorous operational security to protect sensitive personal data.

2. Task 1 Write-up: Visual Awareness

For the first task, I designed a "Digital Literacy Awareness" infographic to visually communicate essential digital skills to my batchmates. I chose Canva to create this resource due to its intuitive interface and professional design templates. My infographic breaks down digital awareness into four distinct, easy-toread topics: defining digital literacy, outlining safe internet practices (like using strong passwords), focusing on proper email etiquette, and listing useful academic tools for students.

The most challenging aspect was condensing broad concepts into brief, digestible bullet points without losing their core educational meaning. However, I found it incredibly interesting to experiment with color gradients and visual hierarchy to guide the reader's eye smoothly from one topic to the next. Designing this infographic reinforced that effectively presenting information is just as vital as the information itself.

3. Task 2 Write-up: Digital Portfolio Setup

For Task 2, I focused on building a foundational professional digital footprint by setting up profiles on GitHub, LinkedIn, and Kaggle. Establishing this presence early is an essential step for both academic and career growth.

GitHub serves as a critical version control platform. Over the next four years, I will use it as my primary technical portfolio to host my Python scripts, showcase AI/ML projects, and learn open-source collaboration. LinkedIn is the premier professional networking site. I established my educational background there to build early credibility, planning to connect with university alumni and actively search for summer internships. Finally,

I chose Kaggle, a specialized community for data scientists. As an AI enthusiast, Kaggle will be my main practice ground for accessing real-world datasets and building predictive models before entering the job market.

4. Task 3 Write-up: Coding & Collaboration Platforms

To familiarize myself with essential academic and professional platforms, I explored both coding practice environments and cloud collaboration tools. For Part A, I created an account on HackerRank and successfully completed the beginner-level Python introductory challenge. This provided a great introduction to algorithmic problem-solving interfaces and reinforced basic syntax.

For Part B, I utilized Google Workspace to build a 5-question 'Digital Literacy Awareness Quiz' using Google Forms. The quiz features a mix of multiple-choice and short-answer questions covering UPI safety, Two-Factor Authentication, and official reporting channels. These platforms will be immensely helpful academically. HackerRank will serve as my daily practice ground for improving coding logic, while Google Forms and Sheets will be invaluable for collecting data, conducting surveys, and collaborating efficiently during upcoming group projects.

5. Task 4 Write-up: Email & Social Media Etiquette

Effective online communication is a cornerstone of digital literacy. In this module, I drafted two professional emails: one requesting an assignment extension from a professor, and another inquiring about a summer internship opportunity. Applying proper subject lines, formal greetings, and professional sign-offs highlighted how structured communication builds immediate credibility.

Reflecting on the social media checklist, poor digital communication can easily cause real-world problems. For example, if a student uses an overly casual tone or text-speak when messaging a corporate recruiter on LinkedIn, they might instantly lose a job opportunity due to a perceived lack of professionalism. This could easily be avoided by pausing to proofread and ensuring the tone matches the formal context of the platform.

6. Task 5 Write-up: Cybercrime Case Study

Researching identity theft for the cybercrime case study was an eye-opening experience. I was most surprised by how seamlessly scammers can harvest highly sensitive documents—like Aadhar and PAN cards—simply by masquerading as corporate recruiters offering fake internships. It demonstrated that advanced technical hacking isn't always necessary when psychological manipulation and social engineering work just as well.

As a direct result of this research, the one digital habit I will change immediately is how I approach unprompted links and attachments. I plan to implement a strict "verify before clicking" rule and ensure Two-Factor Authentication (2FA) is universally enabled on all my crucial accounts to prevent unauthorized access to my digital identity.

7. Conclusion

Overall, this project provided a highly practical foundation in digital literacy. Moving beyond theoretical concepts, I learned how to actively curate a professional identity, utilize cloud collaborative tools, draft formal academic communications, and protect myself against realistic cyber threats targeting college students. These are essential life skills that will heavily support both my academic journey and my future career as an engineer in the tech industry.
